

Stakeholder Interview

Stakeholder Interview

Product: GreenScore

Stakeholder: Dev and Design (Founder & Product Owner)

Interviewer Role: Team 10 Product & UX Lead

Interview Type: Product Discovery + Business Alignment

1. Interview Objectives

This interview was conducted to establish a shared foundation between the product team and the stakeholder before any design or engineering work begins. The objectives below define the scope of inquiry and the decisions this session is intended to inform.

- Develop a precise understanding of the business problem GreenScore is positioned to solve, and the gap it fills in the current market landscape
- Define and validate the primary and secondary user segments, their motivations, and the specific contexts in which they will use the product
- Establish and align on the boundaries of the Minimum Viable Product — what is essential, what is aspirational, and what is explicitly deferred
- Surface key constraints, technical dependencies, risks, and non-negotiables that must inform the design and development approach
- Align on a shared product vision, success criteria, and the principles that will guide decision-making throughout the build

2. Stakeholder Background

Q1 — Can you briefly introduce yourself and your role in GreenScore?

Dev & Design — Founder & Product Owner: I am the founder and product owner of GreenScore. I originated the concept, defined the product vision and strategic direction, and hold final authority over decisions relating to features, user experience, and go-to-market positioning. My background spans product design and development, which means I approach this not just as a business owner, but as someone who deeply understands the technical and experiential constraints we are working within.

Q2 — What motivated you to build GreenScore?

Dev & Design — Founder & Product Owner: The motivation came from a recurring frustration: people genuinely want to live more sustainably, but the guidance available to them is almost entirely abstract. "Reduce your carbon footprint" is not an instruction — it is an aspiration without a path. I watched people absorb that kind of messaging and feel worse about themselves rather than empowered to act.

What was missing was not awareness. People are aware. What was missing was a system something that could take the enormous, overwhelming complexity of sustainable living and reduce it to a clear, achievable action that someone could take in the next five minutes. And then make that feel good. That is the gap GreenScore is built to fill.

3. Problem Definition

Q3 — What is the core problem GreenScore solves?

Dev & Design — Founder & Product Owner: GreenScore solves the motivation and accountability gap in sustainable behaviour change. The core insight is that good intentions alone do not produce lasting habits — people need three things: clarity on what action to take, immediate feedback that the action mattered, and a system that rewards consistency over time.

Without feedback and visible progress, sustainable habits collapse within the first week. GreenScore addresses this directly by turning abstract environmental goals into a structured daily practice, and making the cumulative impact of that practice visible in terms people can actually relate to.

“The world does not have a sustainability awareness problem. It has a sustainability behaviour problem. That is what we are solving.”

Q4 — Who experiences this problem most acutely?

Dev & Design — Founder & Product Owner

The problem is universal, but the pain is most concentrated in three groups:

- Environmentally conscious individuals aged 18–35 who care deeply about climate issues but lack the structure to translate concern into consistent daily action
- People who have previously attempted sustainable lifestyle changes and abandoned them not because of lack of will, but because there was no feedback loop to sustain motivation
- Young professionals and students who want to adopt sustainability as a personal identity, not just an occasional behaviour, but have no system to anchor that identity around

Q5 — How are users currently attempting to solve this on their own?

Dev & Design — Founder & Product Owner: The current landscape is fragmented and inadequate. Some users rely on generic habit tracking apps that were never designed with sustainability in mind — they can log behaviour, but the tool has no understanding of environmental context or impact. Others follow sustainability content creators on social media and attempt to implement advice without any mechanism for tracking or accountability. A third group uses journal-based or spreadsheet approaches that are high-effort, low-feedback, and rarely survive contact with a busy week.

None of these approaches close the loop between action and impact. That is the critical missing piece — and it is precisely where GreenScore enters.

4. Target Users & Use Cases

Q6 — Who is the primary target user?

Dev & Design — Founder & Product Owner: The primary user is what I would describe as the Intentional Beginner — someone who has already crossed the threshold of caring about sustainability and is actively looking for a way to embed it into their daily life. They are not activists or experts. They are an ordinary person who wants to do their part, but needs a system that makes doing so feel manageable, measurable, and rewarding.

Demographically, we are looking at 18–35, mobile-native, likely urban or semi-urban, and already accustomed to habit or wellness tracking in other areas of their life — fitness, sleep, mindfulness. GreenScore speaks the same language as those products, but applies it to environmental impact.

Q7 — Can you walk us through a typical user session?

Dev & Design — Founder & Product Owner

The interaction model is deliberately simple. A session should never take more than sixty seconds. Here is the intended flow:

1. User opens the app at any point during their day — morning routine, commute, or evening wind-down
2. They are presented with a curated menu of 15–20 track-able green actions, organized across five categories: energy, waste, transport, food, and water
3. They tap to log the actions they completed — one tap per action, no forms, no friction
4. Points are awarded instantly, based on the relative environmental impact of each action
5. The user sees their streak update, their level progress, and any badges they have earned or are close to earning
6. The impact dashboard updates to reflect their cumulative contribution in tangible terms — CO₂ saved, plastic items avoided, water conserved — translated into human-scale equivalents they can actually picture
7. If a weekly challenge is active, they see their progress against that goal

The entire interaction is designed to deliver a hit of genuine satisfaction — not manufactured gamification noise, but real, grounded feedback that says: what you did today mattered.

5. Product Scope & MVP

Q8 — What features must be present in the MVP, without exception?

Dev & Design — Founder & Product Owner

The MVP must deliver the complete core loop — log, earn, see impact, stay motivated. Every feature below is load-bearing for that loop. Remove any one of them and the product fails to function as intended.

- Daily action menu spanning 15–20 trackable habits across five categories (energy, waste, transport, food, water)
- One-tap logging — the entire logging experience must be completable in under thirty seconds

- Points system calibrated to real environmental impact, not arbitrary values — a skipped car trip must score meaningfully higher than a reusable cup
- Streak tracker rewarding consecutive days of logging at least three actions
- Five-tier level progression: Seedling → Sprout → Sapling → Tree → Forest
- Badge system marking meaningful milestones: 7-Day Streak, Plastic-Free Week, Public Transport Champion, 30 Meatless Meals
- Impact dashboard presenting cumulative environmental contribution in tangible, human-scale equivalents
- Weekly challenge with bonus points to drive re-engagement and habit diversity
- Monthly impact report summarizing the user's environmental contribution across all categories
- Custom action creation, allowing users to add personal sustainability habits not covered by the default menu

“The MVP must be focused and reliable. A product that does ten things imperfectly will be abandoned. A product that does one thing extraordinarily well will be evangelized.”

Q9 — What is explicitly out of scope for the MVP?

Dev & Design — Founder & Product Owner

Scope discipline is as important as feature selection. The following are deferred until the product has demonstrated product-market fit and has a stable, engaged user base:

- Social features: leaderboards, friend challenges, community feeds. These will be valuable in a later phase but introduce significant complexity and moderation risk at MVP stage

- AI-powered personalization or Chabot interactions — not because the idea lacks merit, but because the data required to do it well does not exist at launch
- Third-party integrations with fitness trackers, smart home devices, or external platforms
- Elaborate UI customization — themes, avatars, profile personalization. The product must earn the right to ask users to invest in this

6. Design & UX Direction

Q10 — How should the product look, feel, and communicate?

Dev & Design — Founder & Product Owner

The design language should feel like a premium wellness product, not a game. Think calm. Natural. Considered. The colour palette should draw from the earth — deep greens, warm neutrals, the occasional accent that suggests growth without screaming it. Typography should be legible and trustworthy, not playful.

The gamification elements must feel earned, not cheap. Badges and level-ups should have genuine visual weight — when a user crosses a threshold, it should feel like an occasion. But the day-to-day experience should be serene, not stimulating. We are building a habit, not an addiction.

Q11 — What are the core UX principles?

Dev & Design — Founder & Product Owner

Three principles above all others:

- Speed over depth: no interaction critical to daily use should require more than two taps. If it does, it is over-engineered
- Honesty over flattery: the impact data must be accurate and defensible. We will never inflate numbers to make users feel better. Trust, once broken, is not recoverable
- Calm over noise: every notification, animation, and UI element should serve the user's experience, not compete for their attention

7. Business Model & Growth

Q12 — How does GreenScore generate revenue?

Dev & Design — Founder & Product Owner

The model is freemium. The core experience — daily action logging, points, streaks, basic badges, and the impact dashboard — is free and always will be. The value of the product depends on mass adoption, and a paywall on the core loop would undermine that.

Premium features are designed to serve users who have already built the habit and want to go deeper: detailed monthly impact analytics, advanced badge collections, custom action libraries, and eventually, early access to social and challenge features. The conversion path is earned through demonstrated product value, not forced.

Q13 — What does success look like at six months post-launch?

Dev & Design — Founder & Product Owner

Success at six months is not primarily a revenue number — it is a behaviour signal. The metrics I am watching are:

- Daily Active Users as a proportion of total registered users — we want this ratio to be high, indicating genuine habit formation rather than passive installs
- Streak retention at day 7, day 14, and day 30 — these are the natural dropout points for any habit-based product
- Average actions logged per session — if users are logging one action and leaving, the engagement model is not working
- Net Promoter Score — are users recommending this product to people they care about?
- Freemium-to-premium conversion rate among users who have maintained a 30-day streak

Revenue matters, of course. But a product that is generating revenue from users who are not genuinely engaging is sitting on a retention time bomb. We build the habit first. Revenue follows.

8. Risks & Constraints

Q14 — What are the most significant risks you are carrying into this build?

Dev & Design — Founder & Product Owner

Four risks keep me up at night, and I want the product team to internalise all of them:

- The Week One Cliff: every habit-based product loses the majority of its users in the first seven days. Our onboarding experience and the immediacy of the reward loop must be engineered specifically to survive this window. If we do not nail the first session, nothing else matters
- Impact Data Credibility: we are making claims about environmental contribution. If those numbers are wrong, exaggerated, or inconsistent, we will be called out publicly and the product will not recover. Every figure we display must trace back to a credible, citable source
- Gamification Fatigue: poorly implemented gamification feels manipulative. Points and badges must feel meaningful, not mechanical. If users sense that the reward system is designed to exploit rather than celebrate, they will disengage permanently
- Scope Creep: the temptation to add features before the core is proven is the most consistent failure mode in product development. I need the team to be disciplined gatekeepers of the MVP boundary

Q15 — Are there technical or data constraints the team must account for?

Dev & Design — Founder & Product Owner

Two constraints are non-negotiable:

- Environmental impact data must be sourced exclusively from credible, publicly available datasets specifically EPA and UNEP published figures. These values are to be hardcoded, not estimated or interpolated. We are not in the business of producing our own climate science
- The tech stack is defined: Supabase for backend and authentication, Vercel for hosting. The team should not architect around assumptions of infrastructure flexibility at this stage

9. Future Vision

Q16 — Where do you see GreenScore in two years?

Dev & Design — Founder & Product Owner

In two years, GreenScore should be the default sustainability companion for individuals who take their environmental impact seriously — the same way a fitness app becomes the default for someone who takes their health seriously. Not a novelty. Not an experiment. A daily practice that users would genuinely miss if it disappeared.

The expansion roadmap I envision moves in three phases: first, deepen the individual experience: smarter impact modelling, richer achievement systems, and a monthly impact report that users are proud to share. Second, introduce social infrastructure carefully — community challenges, shared goals, peer accountability. Third, explore institutional partnerships — corporate sustainability programmes, educational institutions, and potentially integration into ESG reporting frameworks.

10. Wrap-Up

Q17 — Is there anything the product team should carry into every decision they make?

Dev & Design — Founder & Product Owner

One question. Just one. Ask it every time a feature is proposed, a design is reviewed, a scope change is considered:

“Does this make it more likely that a user will take one green action today that they would not have taken without us?”

If the answer is yes — build it. If the answer is no — cut it. If the answer is uncertain — that uncertainty is the work. Resolve it before proceeding.

This product has the potential to be genuinely useful in the world. Not in a marketing-copy sense — in a real, measurable, behavioural sense. That is the standard we are holding ourselves to. I expect the product team to hold us to it as well.

PRD

GreenScore – Product Requirements Document (PRD)

Product Overview (By Nosadeba)

Product Name: GreenScore

Product Type: Mobile Application

Category: Sustainability / Habit Tracking / Behavioural Change/ Gamification.

About GreenScore App

GreenScore is a mobile application designed to help individuals adopt and sustain environmentally responsible habits through a structured, trackable system. The product transforms sustainability from an abstract concept into a daily, actionable practice by enabling users to log eco-friendly actions, receive immediate feedback, and track their cumulative environmental impact over time.

Unlike generic habit trackers, GreenScore is specifically built around sustainability, providing context-aware actions and measurable environmental outcomes such as carbon emissions reduced, water conserved, and waste avoided.

The core experience is centered on a simple but impactful loop: **log actions > earn points > see impact > stay motivated > build habits.**

Vision Statement:

To become the default daily sustainability companion for individuals worldwide, embedding environmentally conscious behavior into everyday life in the same way fitness apps support physical health.

Mission Statement:

Enable users to take meaningful environmental actions daily by providing clarity, immediate feedback, and long-term motivation.

Problem Statement (By Nosadeba)

Despite increasing awareness of environmental issues such as climate change and pollution, many individuals struggle to consistently adopt sustainable habits in their daily lives. While people often have the intention to act in environmentally responsible ways, this intention rarely translates into sustained behavior due to several key challenges. These include a lack of clear and practical guidance on what actions to take, limited visibility into the real impact of their efforts, and the absence of immediate feedback or reward systems that reinforce positive behavior.

Additionally, existing solutions either provide generic advice without personalization or fail to engage users over time, leading to low retention and inconsistent usage. As a result, users experience a disconnect between their environmental values and their everyday actions.

Core Problem:

There is a significant gap between users' willingness to live sustainably and their ability to maintain consistent, measurable, and motivated environmentally friendly behaviors due to insufficient guidance, feedback, and habit reinforcement mechanisms.

Goals & Objectives (By Nosadeba)

Primary Goal

To enable users to build and sustain environmentally friendly habits through a system that provides clarity, feedback, and motivation.

Key Objectives

- **Simplify sustainable living**
Break down complex environmental goals into small, achievable daily actions
- **Increase habit consistency**
Encourage users to perform and log eco-friendly actions daily

- **Provide immediate feedback**
Reinforce behavior through instant rewards and visible progress
- **Make impact tangible**
Translate environmental contributions into relatable, human-scale metrics
- **Drive long-term engagement**
Build a system users return to daily, not occasionally

Product Success Objectives

GreenScore succeeds when users can :

- Take at least one sustainable action daily
- Maintain consistent usage over time (habit formation)
- Feel a sense of progress and accountability
- Integrate sustainability into their identity and lifestyle

Key Features (MVP) (By Mook Sirinada)

- **Daily Action List**

Provide ~15-20 simple, trackable green actions

Grouped into categories: energy, waste, transport, food, water

Actions should be practical and easy to do in daily life

UX Guidance (By David)

The action menu is where users decide in seconds whether this product has value. The design must communicate that each action is achievable today, not aspirational. Iconography should reinforce category identity. Consider progressive disclosure if 20 items creates visual density — show most-used first, reveal the full menu one tap further.

- **One-tap Logging**

Users can log actions with a single tap

No typing, no forms, minimal steps

Entire flow should take less than 1 minute

- **Point System**

Each action gives points based on real environmental impact

Higher-impact actions = higher points

Points act as instant feedback

- **Streak System**

Track consecutive days of activity

Require a minimum number of actions per day

Encourage daily consistency

- **Level System**

Progress through levels (Seedling → Sprout → Sapling → Tree → Forest)

Based on accumulated points or activity.

- **Badge / Achievement System**

Reward users for key milestones (For example 7-day streak, plastic-free week)

Highlight meaningful achievements

- **Impact Dashboard**

Show total environmental impact (CO₂, plastic, water)

Present data in simple, easy-to-understand format

- **Weekly Challenge**

Provide weekly goals with bonus points

Encourage users to try different actions

- **Monthly Report**

Summarize user activity and impact

Highlight key achievements and progress

- **Custom Actions**

Allow users to create their own actions

Support different lifestyles and personal goals

Out of Scope — MVP Exclusions (By David)

Scope discipline is treated as a product value, not a project management constraint. The following are deferred until the product has demonstrated product-market fit and has an established, engaged user base.

1. Social Features
2. AI Personalization
3. Third-Party Integrations
4. Automated Challenge Generation

The rationale for each deferral is deliberate. Social features introduce moderation risk at a stage when the team should be focused on core loop quality. AI personalization requires training data that does not exist at launch. Third-party integrations create dependencies that can destabilize an MVP. UI customization is a reward for a product that has earned the user's investment — not a launch feature.

Users/Experience Flow (By: Eke Ifunanya Angela)

Target Users & Use Cases, Personas, Userflow/User journey map:

Target Users

1. Intentional Beginners (Primary)
 - Age: 18–35
 - Wants to live sustainably but needs structure
2. Drop-off Users (Secondary)
 - Tried sustainability before but quit
3. Identity Builders
 - Want sustainability as part of their lifestyle identity

Core Use Cases

Use Case 1: Daily Habit Logging

“I want to quickly log what I did today”

- Open app
- Tap completed actions
- Earn points instantly

Use Case 2: Track Progress & Impact

“I want to know if I’m making a difference”

- View dashboard
- See CO₂ saved, plastic avoided
- Understand impact in simple terms

Use Case 3: Stay Motivated

“I want to stay consistent”

- Maintain streaks
- Earn badges
- Complete weekly challenges

User Persona

Persona 1: The Intentional Beginner

Name: Adaeze Okafor

- Age: 24
- Occupation: NYSC Corps Member
- Location: Lagos
- Tech Level: High (mobile-first user)

Background

Adaeze cares about climate change and often watches sustainability content on social media. She *wants* to live eco-friendly but doesn't know how to make it part of her daily life.

Goals

- Start living a more sustainable lifestyle
- Do small actions that actually matter
- Feel like she's making real impact

Pain Points

- Sustainability feels **confusing and overwhelming**
- Doesn't know **what to do daily**
- Loses motivation quickly
- No way to **track progress or results**

Needs

- Simple daily guidance
- Quick and easy tracking
- Visible proof that her actions matter

How She Uses GreenScore

- Opens the app in the evening
- Logs 3–5 actions (e.g., reused bag, turned off lights)
- Gets excited seeing streaks and points
- Feels proud seeing “You saved X plastic”

Key Quote

“I want to help the planet, I just need something that tells me what to do and shows me it's working.”

Persona 2: The Habit Drop-off User

Name: Tunde Balogun

- Age: 29
- Occupation: Product Designer
- Location: Remote worker (Ibadan/Lagos hybrid)
- Tech Level: Very High

Background

Tunde has tried being eco-friendly before — reusable bottles, less plastic, etc. But he always stops after a few weeks because life gets busy.

Goals

- Stay consistent with good habits
- Build sustainability into his lifestyle
- Track progress like he does with fitness apps

Pain Points

- Starts strong, then falls off after a week
- Existing tools feel generic and boring
- No reward system or motivation loop
- Doesn't see real impact → feels pointless

Needs

- Strong motivation system (streaks, rewards)
- Fast logging (no stress)
- Clear progress tracking

How He Uses GreenScore

- Logs actions during commute or before bed
- Focuses on maintaining streaks
- Tries weekly challenges for extra points
- Aims to reach higher levels (Tree → Forest)

Key Quote

“If I can see progress and stay consistent, I'll stick with it.”

User Flow

First-Time User (Onboarding)

1. Open app
2. Quick intro (why it matters)
3. Select interests (optional)
4. Land on dashboard

Daily Usage Flow

1. Open app
2. View action menu
3. Tap completed actions
4. Earn points instantly
5. See:
 - Updated streak
 - Level progress
 - Badge unlocks
6. View updated impact dashboard
7. Check weekly challenge progress

Monthly Flow

1. Receive monthly report
2. View summary:
 - Total actions
 - Environmental impact
3. Share or reflect

User Journey Map

User Journey Map 1: Adaeze (Intentional Beginner)

Stage	Actions	Thoughts	Emotions	Pain Points	Opportunities
Discovery	Sees app on social media / hears from friend	“This looks simple... maybe I can try”	😊 Curious	Sustainability feels overwhelming	Clear messaging: “ <i>Start small, 30 seconds daily</i> ”
Onboarding	Downloads app, opens it, sees intro	“This is not complicated”	😊 Comfortable	Fear of complex setup	Keep onboarding short (≤ 2 screens)
First Use	Sees action list, taps 3–4 actions	“Oh wow, that was fast!”	😊 Excited	Unsure what actions matter	Highlight recommended actions
Feedback Moment	Sees points + impact (CO ₂ , plastic saved)	“I actually made a difference”	😊 Proud	Impact may feel abstract	Use relatable equivalents (“like planting trees”)
Habit Building (Day 2–7)	Returns daily, logs actions	“Let me not break my streak”	🔥 Motivated	Might forget to return	Add reminders + streak nudges
First Milestone	Earns badge + level up	“I’m consistent now!”	🏆 Accomplished	Motivation drop after milestone	Introduce next goal immediately

Summary Insight

She needs:

- Clarity (what to do)
- Simplicity (fast logging)
- Emotional reward (impact + streaks)

User Journey Map 2: Tunde (Habit Drop-off User)

Stage	Actions	Thoughts	Emotions	Pain Points	Opportunities
Re-entry	Downloads app after past failures	“Will this actually work?”	 Doubtful	Past inconsistency	Show proof: streaks, progress system
Daily Logging	Logs actions quickly (≤ 30 s)	“This is easy to maintain”	 Satisfied	Time/effort fatigue	Keep UX frictionless (1–2 taps)
Engagement Loop	Tries to earn more points, maintain streak	“Let me do one more action”	 Engaged	Repetition can get boring	Vary actions + categories
Weekly Challenge	Participates in challenge	“Let me complete this”	 Motivated	Might ignore challenges	Add rewards + progress tracker
Progress Growth	Reaches longer streaks, higher levels	“This is part of me now”	 Confident	Plateau after progress	Introduce new levels/rewards
Monthly Reflection	Views impact report	“I’ve done a lot actually”	 Proud	Data might feel generic	Personalize insights

Summary Insight

He needs:

- Consistency tools (streaks)
- Motivation loops (points + challenges)
- Progress visibility (levels + reports)

Success Metrics and KPI (Blessing Ogechi)

To understand if GreenScore is working, we focus on one thing first, are users building a daily habit. Every metric below connects back to that.

1.Retention

Retention shows if users come back after the first experience. This is the strongest signal of habit formation.

We track users at key drop off points:

- Day 7 Retention
Percentage of users who return within the first 7 days This is where most users quit. If they stay, the product is already working
Target: at least 25 percent
- Day 14 Retention
Users who continue after two weeks Shows early habit formation
Target: at least 20 percent
- Day 30 Retention
Users still active after one month Indicates long term behaviour change
Target: at least 15 percent

Why this matters

GreenScore is not a one time use product. If users do not return, the core idea fails.

2. Daily Active Users (DAU)

DAU measures how many users show up every day and take action.

- **Daily Active Users**
Number of unique users who log at least one action in a day
- **DAU to MAU Ratio**
Compares daily users to monthly users
Target: 30 to 50 percent

Why this matters

A high DAU means the app has become part of the user's routine, not something they open occasionally.

3. Engagement (Actions per Session)

This shows how deeply users interact with the product when they open it.

- **Average Actions per Session**
Number of actions a user logs in one session
Target: 3 to 5 actions
- **Sessions per User per Day**
How often users open the app daily
Target: 1 to 2 times

Why this matters

Logging more actions means users are not only opening the app, they are using it as intended.

4. Net Promoter Score (NPS)

NPS measures how users feel about the product.

Users answer one question:

“How likely are you to recommend GreenScore to a friend?”

- **Promoters:** score 9 to 10
- **Passives:** score 7 to 8
- **Detractors:** score 0 to 6

Target: +40 or higher

Why this matters

If users recommend the product, it shows trust and real value. It also drives organic growth.

GreenScore: UX and Technical Requirements (by Adetola Oyero)

1. UX and Design Requirements

The design of GreenScore prioritises clarity, speed, and positive reinforcement to encourage consistent user engagement. The experience should support quick daily interactions while maintaining a visually calm and trustworthy interface.

1.1 Design Tone

The overall visual style of the application should feel calm, modern, and premium. The goal is to avoid visual clutter while maintaining a motivating and rewarding experience.

The interface should emphasise:

- Minimal layout structure
 - Generous spacing between elements
 - Soft, nature-inspired colour palettes
 - Clear typography and legible hierarchy
-
- a) Primary colours should include muted greens and neutral tones to reinforce the sustainability theme. Accent colours may be used sparingly to highlight progress, rewards, or achievements.
 - b) Gamification elements such as badges and streaks should be visually engaging without creating a noisy or overly playful interface.

The design approach balances two emotional tones:

- Calm during regular usage
- Celebratory during rewards or achievements

This contrast helps maintain long-term motivation while preserving a focused interface.

1.2 Interaction Speed and Simplicity

- The product is designed for very short daily interactions. Logging sustainability actions should take no more than 10 seconds.
- Users should be able to record their completed actions with minimal friction through a tap-based interaction model. Text input and complex navigation should be avoided wherever possible.

Key interaction principles include:

- Quick access to the daily logging screen upon opening the app
- Clear visual indication of completed actions
- Immediate feedback after logging actions

Reducing interaction friction is critical to maintaining consistent user engagement.

1.3 Progressive Disclosure

To prevent cognitive overload, the application should gradually introduce features and actions over time.

New users should initially see a smaller set of sustainability actions. As users become familiar with the system, additional actions and challenges can be introduced.

This approach improves usability and encourages continued exploration of the app.

1.4 Behaviour Reinforcement Loop

The application design is structured around a behavioural reinforcement cycle to encourage habit formation.

Trigger:

Users receive reminders or prompts to log daily actions.

Action:

Users quickly log sustainability actions they completed during the day.

Reward:

Users receive points, streak progress, or badges.

Meaning:

Users see the estimated environmental impact of their actions.

This loop strengthens long-term engagement and supports sustainable behaviour change.

2. Technical Requirements

The technical architecture of GreenScore is designed to support rapid development, scalable infrastructure, and reliable data storage.

2.1 Backend Infrastructure

- User data, habit logs, and progress metrics will be stored in a cloud-based database.
- The backend will be powered by **Supabase**

Supabase provides:

- Database storage
- User authentication
- Application programming interfaces (APIs)
- Real-time data updates

This platform enables efficient development and simplifies backend infrastructure management.

2.2 Authentication

User authentication will be handled using Supabase's built-in authentication services.

This will support:

- Account registration
- Secure login
- Password recovery
- User session management

Authentication ensures that user progress and data remain securely stored and personalised.

2.3 Application Hosting

The application will be deployed and hosted using **Vercel**

Vercel provides a scalable hosting environment with fast deployment pipelines and global content delivery networks. This ensures consistent application performance and availability.

2.4 Environmental Impact Data

Environmental impact calculations will be based on publicly available datasets provided by recognised environmental organisations.

Primary sources include: e.g

- United States Environmental Protection Agency
- United Nations Environment Programme

Note: Nigeria has limited data on this

Impact values derived from these datasets will be used to estimate environmental outcomes such as carbon emissions avoided, plastic waste prevented, and water conserved.

To maintain transparency and credibility, the application will present these values as estimated environmental impact equivalents rather than exact measurements.

2.5 Performance Requirements

The application should maintain fast response times to support quick daily interactions.

Key performance goals include:

- Application launch time under one second
- Instant response when logging actions
- Minimal loading delays when displaying progress data

Fast performance ensures that the habit logging process remains seamless and convenient.

Business, Risks, and Future Roadmap (Karo)

1. User Drop-off / Low Retention

Risk: Users may lose interest after initial use

Mitigation:

- Implement streaks, rewards, and gamification
- Introduce weekly challenges and progress feedback
- Provide personalized reminders

2. Inaccurate Impact Measurement

Risk: Environmental impact data may not be precise

Mitigation:

- Use standardized environmental datasets
- Clearly communicate that values are estimates
- Continuously improve data accuracy over time

3. User Fatigue / Overwhelm

Risk: Too many actions may discourage users

Mitigation:

- Limit daily actions to a manageable number
- Personalize action recommendations
- Keep interface simple and intuitive

4. Competition from Existing Apps

Risk: Similar habit or sustainability apps already exist

Mitigation:

- Focus on simplicity and ease of use
- Differentiate through strong gamification and impact tracking
- Localize content for different regions

5. Data Privacy Concerns

Risk: Users may be hesitant to share personal data

Mitigation:

- Minimize data collection
- Ensure transparency in data usage
- Implement secure authentication systems

Business Model

GreenScore adopts a **freemium business model**, allowing users to access core functionality for free while offering advanced features through a premium subscription. This approach lowers the barrier to entry, encourages adoption, and monetizes highly engaged users.

Free Features (Core Experience)

The free tier is designed to deliver immediate value and encourage daily engagement:

- Access to daily sustainability actions (15–20 actions)
- One-tap action logging
- Basic point system and streak tracking
- Limited badge/achievement system
- Basic impact dashboard (simplified environmental metrics)
- Weekly challenges (limited access)

These features ensure users can build sustainable habits without any financial commitment.

Premium Features (Enhanced Experience)

The premium tier focuses on deeper insights, personalization, and long-term engagement:

- **Advanced Impact Analytics**
Detailed breakdown of CO₂ savings, water usage, and waste reduction
- **Personalized Recommendations**
AI-driven suggestions based on user behavior and lifestyle
- **Full Access to Challenges**
Exclusive weekly and monthly challenges with higher rewards
- **Comprehensive Reports**
Detailed monthly and yearly sustainability reports
- **Custom Action Expansion**
Ability to create, categorize, and track unlimited custom actions
- **Ad-Free Experience**
Cleaner and more focused user interface

Revenue Streams

- **Subscription Fees (Primary Revenue Source)**
Monthly or yearly premium plans

- **Brand Partnerships**
Collaboration with eco-friendly companies for sponsored challenges
- **Affiliate Marketing**
Commission from recommended sustainable products
- **Corporate Programs**
Businesses can sponsor employee sustainability programs using GreenScore

Future Roadmap

Short-Term (0–3 Months)

- Launch Minimum Viable Product (MVP)
- Implement core features (action list, logging, points, streaks)
- Collect user feedback for improvements

Mid-Term (3–6 Months)

- Introduce personalized recommendations using user behavior data
- Expand badge and reward system
- Improve analytics and reporting features

Long-Term (6–12 Months)

- Integrate AI-driven sustainability suggestions
- Develop community features (leaderboards, social sharing)
- Partner with eco-friendly brands and organizations
- Expand to multiple regions with localized content

Market Intelligence Report

MARKET OVERVIEW (By Adebalogun Rasheed Akanni).

1. Market Size & Growth Trajectory

GreenScore operates at the convergence of two high-growth digital markets: sustainability technology and habit-tracking applications.

Sustainability & Eco-Tech Market

The global market for eco-focused consumer applications is expanding rapidly, currently valued between **\$500 million and \$3.6 billion**, depending on classification scope. This sector is projected to grow at a **compound annual growth rate (CAGR) of 10%–15%** over the next decade.

Growth is driven by:

- Increasing global awareness of climate change
- Regulatory and corporate emphasis on ESG (Environmental, Social, Governance)
- Rising consumer demand for sustainable lifestyle solutions

Habit Tracking & Digital Wellness Market

The global habit-tracking app market was valued at approximately **\$1.7 billion in 2025** and is projected to reach **over \$5.2 billion by 2034**, growing at a **CAGR of 13%–14%**.

This market is:

- Highly validated
- Behavior-driven
- Dependent on retention and engagement mechanics

Market Intersection Insight

GreenScore sits at a strategic intersection where **behavioral technology meets sustainability**, positioning it to leverage growth from both sectors simultaneously.

2. Demographics & Behavioral Drivers

GreenScore targets **Gen Z and Millennials (ages 18–35)**—a demographic defined by digital fluency and value-driven behavior.

Climate Anxiety to Climate Agency

This audience is:

- Highly aware of environmental challenges
- Frustrated by abstract, non-actionable guidance

They are actively seeking:

- Control over their personal impact
- Clear, actionable steps
- Tangible proof that their actions matter

The Quantified Self Movement

This demographic already engages with:

- Fitness tracking
- Sleep monitoring
- Productivity tools

As a result:

Tracking environmental impact is a natural extension of existing self-optimization behavior

Behavioral Insight

The market demand is not for more information, but for systems that convert intention into consistent action

3. Competitive Landscape: The “Goldilocks Gap”

The current ecosystem is fragmented into two primary categories:

Generic Habit Tracking Apps

Examples: Habitify, Streaks, Productive

Strengths:

- Strong engagement mechanics
- Intuitive user experience

Limitations:

- No environmental context
- No measurable real-world impact

Carbon Footprint & Sustainability Apps

Examples: Klima, Joro, Pawprint

Strengths:

- Data-driven insights
- Environmental credibility

Limitations:

- High onboarding friction
- Low daily engagement
- Weak habit formation systems

GreenScore's Market Position

GreenScore occupies a distinct “Goldilocks zone” by combining:

- The **speed and usability** of habit trackers
- The **credibility and meaning** of carbon tracking tools

Competitive Advantage

This positioning enables:

- High user engagement
- Meaningful behavioral reinforcement
- Differentiation in a saturated market

4. Market Challenges

Retention Drop-Off (Week-One Cliff)

A critical industry-wide issue:

- Most habit-based apps experience significant churn within the first **7–14 days**

Root causes:

- Weak feedback loops
- Lack of perceived progress
- Insufficient emotional reinforcement

Gamification Fatigue

Users increasingly reject:

- Superficial reward systems
- Manipulative engagement tactics
- Sustainable engagement requires:
 - Meaningful, earned rewards
 - Authentic progress indicators

Trust & Greenwashing Risk

Sustainability-focused products face:

- High user skepticism
- Scrutiny of environmental claims

Any perceived inaccuracy in impact data can:

- Erode trust
- Lead to reputational damage

Market Reality Insight

Success in this market is determined less by feature breadth and more by **trust, retention, and behavioral reinforcement**

5. Monetization & Growth Opportunities

Freemium Model (B2C)

GreenScore adopts a freemium structure:

- **Free tier:** Core habit loop (logging, scoring, impact tracking)
- **Premium tier:** Advanced analytics, expanded achievements, customization

Conversion depends on:

Demonstrating consistent user value and habit formation before monetization

B2B Expansion: Corporate ESG Opportunity

A major long-term opportunity lies in **enterprise sustainability**:

- Organizations are increasingly required to track **Scope 3 emissions**, including employee behavior
- There is growing demand for tools that:
 - o Encourage sustainable actions
 - o Provide measurable reporting
 - o Drive employee engagement

Strategic Expansion Path

GreenScore can evolve into:

A **B2B2C sustainability platform**, serving both individuals and organizations

6. Strategic Market Opportunity

GreenScore is positioned to define a new product category:

“Sustainability Habit Engine”

This category combines:

- Daily habit formation
- Environmental impact tracking
- Behavioral reinforcement systems

Differentiation Strategy

Unlike existing solutions, GreenScore:

- Focuses on **daily action, not passive tracking**
- Emphasizes **low friction and speed**
- Anchors engagement in **credible, real-world impact data**

7. Market Outlook

The market is:

- Large and growing
- Behaviorally driven
- Underserved in terms of retention and meaningful engagement

Existing solutions fail due to:

- Poor habit reinforcement
- High friction
- Lack of trust

Final Strategic Insight

GreenScore's success depends on its ability to transform sustainability from an abstract goal into a **daily, measurable, and rewarding behavior system.**

Competitor Analysis (By Mook and Ebuka)

Direct Competitors

GreenScore's direct competitors are sustainability-focused applications such as Oroeco, JouleBug, and Giki. These apps are designed to support environmentally friendly behavior, but each focuses on a specific aspect rather than the full user journey.

- **Oroeco** focuses on carbon footprint tracking using lifestyle data, strong in data accuracy and education, but overly complex and requires heavy input, making it impractical for consistent daily use
- **JouleBug** focuses on gamified eco-actions with points and challenges, engaging at first, but relies on superficial gamification and lacks credible, meaningful impact, which can reduce long-term

- **Giki** focuses on sustainable shopping decisions, useful in specific scenarios, but highly limited in scope and not designed to support ongoing habits or daily engagement

Indirect Competitors

Indirect competitors include habit tracking apps such as Habitica and Streaks. These apps are not designed for sustainability, but they are strong in building consistent user behavior and daily engagement.

- **Habitica** turns habits into a game, highly engaging through gamification, but motivation is driven by gameplay rather than real-world value, making the experience feel disconnected from meaningful impact
- **Streaks** focuses on simple habit tracking with a clean interface, easy to use and effective for basic tracking, but lacks depth, offering no feedback beyond completion and no sense of real contribution

Positioning & Capability for Direct Competitors

Aspect	GreenScore	Oroeco	JouleBug	Giki
Behavior Change	Built for consistent daily habits with clear action structure	Does not support behavior change, focuses only on passive data tracking	Encourages occasional actions but lacks a structured habit system	Not designed for repeated use, only supports one-off decisions
Impact Visibility	Clear, simple, and easy to understand impact (CO ₂ , water, etc.)	Overly complex and data-heavy, difficult for users to relate to daily life	Superficial impact, lacks credibility and depth	Very limited, only applies to shopping context
Engagement	Balanced and sustainable engagement (habit + reward + progress)	Low engagement due to complexity and lack of motivation system	Relies heavily on gamification, which can feel gimmicky and unsustainable	Minimal engagement, not designed for frequent use

- Oroeco → strong in impact visibility, but overly data-heavy and impractical for daily use, resulting in weak engagement and no real habit formation
- JouleBug → strong in engagement through gamification, but lacks credible and meaningful impact, making the experience feel superficial over time
- Giki → limited to a narrow shopping use case, with no support for ongoing behavior or habit formation, leading to low long-term engagement
- GreenScore → combines structured behavior change, clear and credible impact visibility, and sustainable engagement into a cohesive daily system

Positioning & Capability for Indirect Competitors

Aspect	GreenScore	Oroeco	JouleBug
Behavior Change	Structured habit system tied to meaningful actions	Strong habit system but disconnected from real-world outcomes	Basic habit tracking with limited depth or progression
Impact Visibility	Directly links actions to real environmental impact	No impact visibility, actions feel meaningless beyond completion	No impact visibility, only tracks streaks with no real outcome
Engagement	Combines purpose, reward, and progress for long-term use	Engagement depends on game mechanics, not meaningful motivation	Engagement is minimal, relies on user discipline rather than system support

- Habitica → strong in habit formation and engagement through gamification, but motivation is driven by gameplay rather than real-world value, making actions feel disconnected and ultimately less meaningful
- Streaks → effective for simple habit tracking, but overly basic and lacks depth, offering no purpose or impact feedback beyond maintaining a streak
- GreenScore → addresses these gaps by connecting habits to real environmental impact, turning routine actions into meaningful, purpose-driven behavior

Feature Comparison for Direct Competitors

Aspect	GreenScore	Oroeco	JouleBug	Giki
Ease of Use	Extremely simple (one-tap, low friction)	High friction onboarding and heavy data input required	Moderately simple but still requires multiple steps	Limited usability, restricted to specific scenarios
Habit Tracking	Fully supports daily habit formation	No habit tracking, only passive monitoring	Inconsistent support, not designed for structured habits	No habit tracking at all
Impact Feedback	Clear, credible, and relatable	Technically accurate but overly complex and not user-friendly	Lacks credibility and meaningful interpretation	Narrow and incomplete, only covers product-level impact
Motivation System	Meaningful rewards (points, streaks, levels) tied to progress	Lacks motivation system, offers little reason to return	Overuses gamification, which can feel superficial	No motivation system to encourage continued use
Daily Engagement	Designed for quick, repeatable daily use	Not suitable for daily engagement due to complexity	Engagement is inconsistent and may drop over time	Very low, only used occasionally when needed

- Oroeco → provides credible and detailed environmental data, but the experience is overly complex and data-heavy, making it difficult to sustain daily engagement
- JouleBug → initially engaging through gamification, but relies on shallow reward systems with limited credibility, which can reduce long-term user trust and motivation
- Giki → useful in a narrow shopping context, but highly limited in scope and not designed to support continuous behavior or habit formation
- GreenScore → simplifies the experience while combining habit tracking, clear impact visibility, and meaningful motivation into a cohesive daily system

Feature Comparison for Indirect Competitors

Aspect	GreenScore	Habitica	Streaks
Ease of Use	Combines habit tracking with meaningful purpose	Strong system but lacks any real-world relevance	Basic system with limited depth and flexibility
Habit Tracking	Core product focus	Completely absent	Completely absent
Impact Feedback	Provides real-world environmental outcomes	No outcome beyond task completion	No outcome beyond maintaining streaks
Motivation System	Purpose-driven and reward-based	Relies on game mechanics rather than meaningful impact	Relies on self-discipline, offers little intrinsic motivation
Daily Engagement	Fast, meaningful, and consistent	Engagement tied to gameplay, not long-term purpose	Engagement is minimal and may not sustain long-term use

- Habitica → strong motivation through game mechanics, but engagement is driven by artificial rewards, with no connection to real-world impact or meaningful outcomes
- Streaks → simple and effective for tracking consistency, but overly minimal and lacks purpose, offering no meaning beyond maintaining a streak
- GreenScore → combines a structured habit system with real-world environmental impact, turning routine actions into meaningful, purpose-driven behavior

S.W.O.T ANALYSIS FOR GREENSCORE: (By Eke Ifunanya Angela)

	Strength	Weakness
Internal	Clear Value Proposition • Turns abstract sustainability into simple daily actions • Solves a real, validated problem (behavior gap)	Dependence on User Honesty • Self-reported actions → cannot fully verify accuracy
	Strong Core Loop (Habit System) • Log → Earn → See Impact → Repeat • Designed for daily engagement and retention	Risk of Engagement Drop • Habit apps naturally face early user drop-off • Requires strong onboarding to survive first 7 days
	Effective Gamification • Points, streaks, levels, badges • Proven to increase motivation and consistency Tangible Impact Feedback • Shows real-world equivalents (e.g., trees, plastic saved) • Builds emotional connection and trust	Limited Personalization (MVP Stage) • No AI or adaptive recommendations initially • May feel generic over time Gamification Fatigue Risk • Users may get bored if rewards feel repetitive
	Simple & Fast UX • One-tap logging (≤ 30 seconds)	Static Impact Data • Hardcoded data (EPA/UNEP)

	• Low friction → higher adoption	• May not feel personalized or localized
	Focused MVP Scope • Clear priorities → reduces overbuilding risk • Strong foundation before scaling	Monetization Dependency on Retention • Freemium model relies heavily on: ○ Long-term engagement ○ Habit formation
	Opportunities	Threats
External	Growing Sustainability Awareness • More people want to live eco-friendly • Strong global climate consciousness trend Expanding Habit Tracking Market • High adoption of wellness and productivity apps • Users already comfortable with habit tracking	Competition from Existing Apps • Habit trackers (strong engagement systems) • Sustainability apps (existing niche players) Low Switching Cost • Users can easily move to another app • Requires strong differentiation & retention
	Demand for Gamified Experiences • Gamification is now a standard engagement tool • Users enjoy reward-based	High User Drop-off Rates • Common in habit-based products • “Week One Cliff” risk is

	systems	very high
	Future AI & Personalization • Opportunity to introduce: Smart recommendations Personalized habit suggestions	User Skepticism About Impact Data • If impact feels inaccurate → loss of trust • Public criticism risk
	Partnerships & Expansion • Corporate sustainability programs (ESG) • Schools & universities • NGOs & environmental organizations	Over-Gamification Risk • Users may feel manipulated • Could reduce long-term trust
	Social Features Expansion • Community challenges • Leaderboards • Viral growth potential	External Data Dependency • Reliance on EPA/UNEP datasets • Any inconsistencies affect credibility

This analysis highlights a clear opportunity for GreenScore to differentiate itself through simplicity, engagement, and measurable impact.

Target Market Segmentation (Karo)

GreenScore targets users based on behavioral and demographic characteristics:

Primary Segment

- Age: 18–35
- Tech-savvy individuals
- Already aware of sustainability issues
- Struggle with consistency in daily habits

Secondary Segment

- Students and young professionals
- Busy schedules
- Prefer simple, quick-to-use applications
- Motivated by rewards and progress tracking

Tertiary Segment (Future Expansion)

- Corporate organizations
- Schools and institutions
- Environmentally conscious communities

Market Trends (By Isaac)

The sustainability and habit-tracking markets are evolving beyond awareness and passive tracking toward **action-driven, behavior-focused solutions**. This shift is driven by users' growing need for systems that not only inform but actively guide and sustain daily habits.

1. Shift from Awareness to Action-Based Sustainability

A key trend in the eco-tech space is the movement away from abstract sustainability messaging toward **practical, actionable behavior systems**. Users no longer want general advice like “reduce your carbon footprint”; instead, they seek **clear, daily actions they can perform and track**. This reflects a broader market demand for tools that bridge the gap between intention and execution, a gap already identified in GreenScore's core problem statement.

2. Rise of Gamification as a Retention Mechanism

Gamification has become a standard engagement strategy across digital products, particularly in habit-forming applications. However, the trend is shifting from superficial rewards to **meaningful and purpose-driven gamification**. Users increasingly expect:

- Rewards tied to real progress
- Systems that reinforce long-term behavior
- Emotional satisfaction beyond points and badges

This aligns with the industry challenge of “gamification fatigue,” where only well-designed systems with **authentic value** can sustain engagement.

3. Demand for Measurable and Tangible Impact

Modern users want to **see and understand the impact of their actions** in simple and relatable terms. There is a growing preference for platforms that translate complex environmental data into **tangible equivalents**, such as plastic reduced or CO₂ saved.

This trend reflects a broader shift toward **impact transparency and accountability**, where credibility and clarity are critical for user trust.

4. Growth of the “Quantified Self” Extended to Sustainability

The quantified self movement tracking health, productivity, and lifestyle metrics is expanding into environmental behavior. Users are increasingly comfortable tracking:

- Daily habits
- Personal performance
- Progress over time

This creates a natural opportunity for sustainability apps to integrate into existing user behavior patterns, making **environmental tracking a seamless extension of everyday self-optimization**.

5. Preference for Low-Friction, Mobile-First Experiences

User expectations are shifting toward **speed, simplicity, and minimal effort**. Applications that require complex onboarding or heavy data input are experiencing lower retention rates.

Successful products are characterized by:

- Fast interactions (e.g., one-tap logging)

- Clear user flows
- Minimal cognitive load

This trend directly addresses one of the key failures in existing sustainability apps: **high friction and complexity**.

6. Increasing Importance of Trust and Data Credibility

As sustainability becomes more mainstream, users are becoming more skeptical of environmental claims. This has led to a trend where **data credibility and transparency** are essential for product success.

Users expect:

- Accurate and verifiable impact calculations
- Clear data sources
- Honest representation of outcomes

Any perceived inaccuracy can significantly reduce trust and long-term engagement.

7. Expansion into Community and Social-Driven Engagement

There is a growing trend toward **community-based motivation**, where users engage through:

- Challenges
- Leaderboards
- Shared goals

This enhances accountability and creates opportunities for **viral growth and network effects**, especially among younger demographics.

Trend Summary Insight

The market is moving toward solutions that are:

- Action-oriented rather than informational
- Engaging but not superficial
- Simple yet meaningful
- Data-driven and trustworthy

These trends reinforce the need for products that combine **behavioral design, user engagement, and credible impact tracking** into a unified experience.

Conclusion

The analysis of the market, competitors, and user behavior reveals a clear and consistent insight: while awareness of sustainability is high, **consistent action remains the core challenge**.

GreenScore is strategically positioned to address this gap by transforming sustainability from an abstract concept into a **structured, measurable, and engaging daily habit system**. Unlike existing solutions that focus either on data tracking or generic habit formation, GreenScore integrates both into a cohesive experience that emphasizes **clarity, simplicity, and purpose**.

Furthermore, alignment with key market trends such as action-based sustainability, meaningful gamification, low-friction user experience, and impact transparency strengthens GreenScore's competitive positioning. The product directly responds to the primary weaknesses identified in both direct and indirect competitors, particularly in areas of **engagement, usability, and real-world relevance**.

However, long-term success will depend on the platform's ability to:

- Maintain user engagement beyond the initial adoption phase
- Build and sustain trust through credible impact data
- Continuously evolve its reward and personalization systems

If these challenges are effectively addressed, GreenScore has the potential to not only compete within the current market but also **define a new category of sustainability-focused habit platforms**.
